Insulated Pipe Clamp

Our Insulation Couplings supports and secures the copper tube independent of the insulation. The insulation is then inserted into the coupling to provide a superior vapor barrier to other methods.
1. Coupling spacing should be no more than 60 diameters.
2. Install clamps as close as possible to each side of bend to prevent movement.
3. Acceptable for horizontal, vertical, and inverted installations.
include coupling, strut clamps with welded fastener and locknut.
4. Insulation wall thickness sizes include: 3/8"; 1/2"; 3/4"; 1" and 1-1/2". We currently only carry 3/4" and 1".
5. Temperature rating: -60°F to +225°F.
